# THE MONEY-SAVING ALTERNATIVE TO DIESEL POWER FOR YOUR GMC® W-SERIES TRUCK.

## The perfect choice for lower mileage applications

If you operate your vehicles less than 25,000 miles/year, a GMC W-Series truck powered by a Vortec 6000 V8 gas engine is the perfect combination for you. With a Vortec 6000, you'll save up to \$4,000 on your initial investment compared to the same truck equipped with diesel power.

## The only gas engine available for low cab forward trucks

While competitive low cab forward manufacturers offer only diesel engines, GMC W-Series trucks with 12,000 or 14,500 lbs GVWR give you a choice of gas or diesel to meet your needs best.

In addition the Vortec 6000 gives you the extra flexibility of being able to convert to Compressed Natural Gas (CNG) or Liquid Propane Gas (LPG) alternative fuels. The Vortec 6000 is 50-state compliant with Federal CFFV/LEV and California ULEV emissions requirements.

## Power to get the job done

Powerful Vortec 6.0-liter (365 cu. in.) engines are ideal for commercial applications. They deliver 300 hp and 358 lb.-ft. of torque to handle the toughest jobs.

The Vortec's patented Sequential Port Injection (SFI) helps the truck engine achieve its maximum power and

torque while improving fuel economy. The precise fuel control provided by the SFI system enhances cold start, hot restart and fuel control at idle.

## The convenience of gasoline

GMC W-Series trucks with Vortec engines are easy to operate. Fuel is available at every gas station in the country, so there's no need to search for a truck stop when it's time to fill up. Vortec gas-powered trucks are also more driver-friendly and require less training to operate than diesel trucks, especially for start-ups in cold weather.

## A 3-year/36,000 mile warranty and a choice of extended service contracts to protect your engine investment

The Vortec 6000 is a proven engine with a 200,000-mile design life. It's backed by a 3-year/36,000 mile warranty. In addition, you can purchase extended service coverage for 4 years/75,000-miles, 4 years/100,000-miles, or 5 years/100,000 miles.

Model	GVWR	Truck Style
W3500	12,000 lbs.	Regular Cab
W4500	14,500 lbs.	Regular Cab

### Engine Specifications

Horsepower	300@4400 RPM
Torque	360 lb.-ft @4400 RPM
Injection	Sequential Port Fuel Injection
Displacement	365 CID/6.0L
Cylinders	8
Operating Cycles	4-cycle
Compression	9.4:1
Cooling	Water-cooled
